EFFECTIVE AVIATION SERVICES

AUSTIN, Texas, October 15, 2006 – International RAM Associates, a multi-modal security service provider, works closely with airport and airline management partners to ensure positive customer service and efficient processing, while continuing to meet the dynamic security requirements that exist in airports today. RAM is very experienced in responding to real-time changes in threat levels and local conditions.

In response to the increased threat levels on August 10th, RAM was able to ramp-up within hours to respond to many airports' immediate needs, including providing divestiture services to support the efficient flow of passengers through the checkpoints.

RAM employees maintain up to date knowledge of security operations and approved procedures and are skilled in properly communicating information to all passengers as they are processed through airport security checkpoints.

Properly informed passengers result in less stress and smoother flowing security checkpoint lines, thereby insuring fewer missed and or delayed flights. In addition this service allows TSA officials the ability to concentrate on properly screening the passengers in the security screening process and allows airline representative to concentrate on providing the most positive travel experience while assisting in ticketing and boarding passengers.

In addition to divestiture services, RAM routinely provides a multitude of Mission Support Services to airports and airlines including: Baggage Schlepping, Identification/Ticket Verification, Passenger Assistance, Security, Security Assessments, and certified PCSSP Passenger and Baggage Screening, all with the common goal of being a value added partner working with airlines and airports to ensure safety and an efficient flow of passengers through the airport system. RAM continues to provide screening services to airlines and the TSA and can provide rapid ramp-up for airline and TSA staff augmentation as needed.
