

Technical Services Group

# CAPABILITIES STATEMENT

The RAM-Technical Services Group (TSG) is a premiere security provider with over 30 years of experience in the design, fabrication, installation and maintenance of security and IT solutions. Our experience enables us to integrate component or comprehensive security plans into an overall design and construction of facilities. RAM-TSG's expertise in full life-cycle planning and execution of mission critical programs has included:

## Security Assessments and Consultations

Both Government and Commercial Clients ultimately have the same genuine concern-How do we provide the best protection to our facility at the most effective cost? At RAM-TSG, we believe effective security precautions require a continuous and conscious awareness of one's environment as well as the need to exercise prudence, judgment and common sense. We provide a cadre of devoted security specialists and professionals for developing and managing security programs worldwide. Our security specialists enable clients to utilize Leading Edge Technology. We are capable of performing security assessments on existing operations or projects in the design phase. To reduce the risk of intrusion and terrorist attacks, our security engineers research and design state-of-the-art security systems customized to fulfill clients' needs. These services provide RAM-TSG Client's knowledge of:

- Situational Awareness
- Vulnerability Assessments
- Prioritization of Risk
- Prioritized and Budgeted Options to Improvements

## Facility construction and infrastructure projects

RAM-TSG is dedicated to providing a secure living and working environment during critical security planning, assessment and deployment of a layer security network at all phases of building construction or upgrades. All on-site assets are closely monitored during construction. On-site assets include: equipment for construction; materials for building; the physical building; and all employees.

## Anti-Terrorism programs

RAM Security Experts provide both cost savings value and real life experience in identifying our client's exposure to risk of domestic or foreign terrorist attacks. To maximize security effectiveness, we work closely with clients to identify strengths and correct weaknesses of existing security plans. Anti-Terrorism programs are both geographic and industry specific and customized to each client's individual needs.

Counter-Terrorism Surveillance

- Emergency Preparedness Programs
- Terrorism Pre-Indicator Analysis
- Blast Mitigation and Protection
- Counter-Terrorism Programs
- Cyber-Terrorism Prevention Programs
- Chemical/Biological/Radiological Mitigation
- Air and Sea Radar and Applicability

## Diplomatic mission security

Diplomatic security has a broad scope of global responsibilities, with protection of people, information, and property as its top priority. RAM-TSG has extensive experience providing safe and secure environments for diplomatic missions, ensuring foreign policy is effectively carried out. We provide expertise in designing, managing and installing security systems in embassies, government buildings and high-risk locations.

## IT and security related designs and processes for sensitive government, campus facilities, resorts and large industry applications

RAM-TSG's specialty is providing high level security staff for high-risk individuals or dangerous environments. We have the unique ability to provide state-of-the-art security systems and trained security agents, ensuring the safety of a location, personnel and VIPs.

## Identity management software and hardware applications

Controlling access to exclusive locations is difficult and demands a variety of tools, techniques and expertise. RAM-TSG's experience and IT skills enable us to provide complicated security integration with either existing or custom products. An example would be our Remote Area Monitoring System "RAMS™" used in the secure protection of exit areas.

## Programs - Pilot/Testing

For large system designs, end-users, federal agencies, manufacturers, and internal products, we provide staffing, management, and facility support including a wide range of security related pilot and testing programs. Our offerings include:

- Testing services
- Field replication and/or load testing
- Design verification and validation
- Data Collection and Analysis (DC&A)
- Program/project management support
- Procurement support
- Documentation support
- Value-added engineering
- Design/build services
- Owner's representation
- Implementation and integration services

## Security Related Systems

For both federal and commercial clients we provide security related systems life cycle support including:

- Customer representation
- Large system integration and management
- Research and Development (R&D)
- Concept design and development
- Systems design and validation
- Subject Matter Experts
- Program and management support
- EVMS
- Design/build services
- Warehouse and supply management
- Production support
- Product testing and verification
